

Project Design Phase
Proposed Solution Template

Date	7 july 2026
Team ID	-
Project Name	Book Store
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Traditional bookstores and many existing online platforms make it difficult for users to search, compare, and purchase books efficiently. Customers often face limited search options, lack wishlist functionality, poor inventory visibility, and complicated checkout processes. Administrators also struggle with manual inventory and order management.
2.	Idea / Solution description	Develop a full-stack Book Store Web Application using the MERN Stack (MongoDB, Express.js, React.js, and Node.js) . The system provides secure user authentication, book browsing, advanced search and filtering, wishlist management, shopping cart, customer reviews and ratings, order tracking, and an administrator dashboard for managing books, categories, users, and orders.
3.	Novelty / Uniqueness	The application combines modern MERN technologies with features such as JWT-based authentication, responsive UI, wishlist, reviews and ratings, real-time search, and role-based admin management. It offers an intuitive user experience while simplifying bookstore operations through a centralized management system.
4.	Social Impact / Customer Satisfaction	The platform promotes reading by making books easily accessible to students, professionals, and book enthusiasts. Customers benefit from secure online shopping, genuine reviews, personalized wishlists, and a convenient purchasing experience, resulting in

		higher satisfaction and improved accessibility.
5.	Business Model (Revenue Model)	Revenue can be generated through direct book sales, premium memberships offering exclusive discounts, featured book advertisements from publishers, affiliate marketing, and delivery charges. Future expansion may include subscription plans for e-books and digital content.
6.	Scalability of the Solution	The MERN architecture enables the application to scale efficiently by supporting a growing number of users, books, and transactions. Additional features such as AI-based book recommendations, online payment gateways, cloud deployment, multi-vendor support, and mobile applications can be integrated without significant changes to the existing architecture.
